

STATEMENT OF CAPACITY

Hydrogen Supply Chain Mapping - South Australia

STATEMENT OF CAPACITY

Hydrogen Supply Chain Mapping - South Australia

South Australia is well advanced in the renewables and hydrogen transformation, with 69 percent of its energy generation in 2022 coming from wind and solar PV, and a growing hydrogen project pipeline. Green hydrogen that is produced using low or zero emission sources is renewable, flexible and storable, and can enable decarbonisation across the energy and industrial sectors. This new growth industry will lower global carbon emissions while generating jobs, investment, exports and opportunities for local industry.

This capability mapping and gap analysis study was undertaken to examine the existing trades, services and supply capability that could support a local hydrogen industry, and identify potential low points or gaps. The significant existing industrial capability and capacity that supports South Australia's resources and energy sectors will play a critical role in growing our state's hydrogen ecosystem.

In addition to documenting the existing capabilities that can be applied directly to the

hydrogen industry, such as civil works and water desalination, this report also highlights potential opportunities for local businesses to diversify their existing capability to this sector, eg from the adjacent oil and gas sector, and for investment attraction of new capabilities to the state for the manufacture of items which would otherwise be imported.

Information within this report was captured from the ICN database and used to measure the capabilities of businesses in South Australia against the likely scopes (packages) of work required to support the development of a hydrogen industry in South Australia. The report outlines the number, size and scale of capable businesses across each likely package of work, and whether the business is an Aboriginal Majority Owned Business (AMOB).

Overall, local capability matches were identified for around 75 per cent of the hydrogen supply chain capabilities outlined in this report. High levels of capability are evident in the **Hydrogen - Civil and Mechanical** and **Hydrogen -**

Common Elements Supply categories. As to be expected with an emerging industry, local capability gaps exist, particularly in the **Hydrogen - Downstream Application, Hydrogen - Delivery** and **Hydrogen - Production** categories.

The findings of this study underline the significant opportunity for future growth and development of the hydrogen industry in South Australia, and provide guidance for future investments and activities in building local supplier capability and capacity, industry diversification and investment attraction. It is important to note that a number of businesses were included in the study that, while not currently working specifically on hydrogen projects, do have capabilities aligned with the future requirements of this emerging sector.

Local industry has a high level of competence in meeting the majority of the scopes of work associated with the hydrogen sector. This evaluation applies to the capability of businesses and does not take into account their capacity to handle escalating demand from other projects

and industry sectors in South Australia, other than providing an indication of business scale and size.

Whilst every effort has been made to identify capable businesses, the ICN database of suppliers upon which this report is based may not encompass the entirety of South Australia's industry capability.

CAPABILITY OVERVIEW AND INDEX

Hydrogen - Renewable Energy

Package of Work	Capability	Page
BS - Battery - Manufacture	3	11
CP - Feedstock Supply	1	11
CP - Air Separation	4	12
SPV - Solar Control Equipment - Manufacture	1	13

LIQUEFACTION OF HYDROGEN (LOH) - SEPARATORS - MANUFACTURE

Liquefaction of Hydrogen (LoH) - Separators - Manufacture

Manufacture of separators used during the liquefaction of hydrogen (LoH) process, to remove impurities and separate hydrogen from other gases. Common separators include distillation columns and membrane separators. LoH involves cooling and compressing hydrogen gas to reduce its volume and increase its density, making it more practical for transport and storage.

ABOUT THE STUDY

Industry Capability Network (ICN) is a network of experienced industry procurement and supply chain specialists which introduce local businesses to projects across a range of industries in Australia and New Zealand. In South Australia, ICN SA is embedded within the [South Australian Government's Department of State Development](#) ICN SA's purpose is to maximise procurement and supply chain opportunities for SA industry by connecting local suppliers to project owners, Original Equipment Manufacturers and other buyers through our online database, ICN Gateway, and our extensive network of Industry Consultants.

This report identifies the local industry capability, including trades, services and supply capacity, that already exists in South Australia to support the development of a local hydrogen industry.

To obtain an understanding of the goods and services that are likely to be required to support the hydrogen industry across South Australia, ICN SA made contact with various organisations currently operating in the sector. The information gained from these consultations, along with significant desktop research, allowed ICN SA to identify a range of trade categories and likely scopes of work applicable to the industry. The ICN database was then used to identify company capabilities in South Australia against the likely packages of work required to support the development of a hydrogen industry.

ICN SA would like to acknowledge and thank those that had input into this report for their time and the valuable information provided by them in their respective areas of expertise:

- Department for Energy and Mining (DEM)
- Department for Trade and Investment (DTI)
- South Australian Hydrogen Hubs Incorporated (SA-H2H)
- Office of Hydrogen Power SA (OHPSA)
- BOC Limited
- Site tour of Hydrogen Park South Australia (HyP SA) - developed by Australian Gas Networks (AGN), part of Australian Gas Infrastructure Group (AGIG)

KEY REQUIREMENTS FOR INDUSTRY

Government Regulatory Framework

South Australian Government (State)

For South Australia to develop a sustainable hydrogen industry that provides the best outcomes for communities, respects Native Title and delivers net environmental benefit, a fit-for purpose regulatory framework is required. The South Australian Government has proposed the *Hydrogen and Renewable Energy Act* to regulate renewable energy infrastructure and commercial hydrogen generation in South Australia, which is planned to be introduced to Parliament in late 2023. This information is current as at 13 September 2023. More information on the South Australian regulatory framework can be found here:

<https://www.energymining.sa.gov.au/public-consultations/hydrogen-and-renewable-energy-act>

<https://www.energymining.sa.gov.au/industry/regulatory-services>

Australian Government (Commonwealth)

Commonwealth laws and regulations also apply to the hydrogen industry. The Commonwealth, as represented by the Department of Climate Change, Energy, the Environment and Water, has compiled example Regulatory Lists as an indicative summary of the Commonwealth legislation that may apply to hydrogen projects within Australia for several key elements of the hydrogen supply chain, which can be found here:

<https://www.dcceew.gov.au/energy/hydrogen/regulatory-lists>

Industry Standards

Standards Australia is Australia's representative of the International Organization for Standardization (ISO) and International Electrotechnical Commission (IEC). Standards Australia's ME-093 Hydrogen Technologies Committee covers all aspects of hydrogen, including the production, storage and handling, measurement, transport, transmission and distribution of hydrogen in its pure form, blended with another fuel gas. More information about industry standards relevant to the hydrogen sector can be found here:

<https://www.iso.org/committee/54560/x/catalogue/p/1/u/0/w/0/d/0>

<https://www.standards.org.au/engagement-events/strategic-initiatives/hydrogen>

**NB Standards Australia is not responsible for enforcing regulations or certifying compliance with standards.*

BS EN ISO 5349-1:2001	Mechanical vibration. Measurement and evaluation of human exposure to hand-transmitted vibration. General requirements
BS EN ISO 9001:2015	Quality management systems. Requirements
BS EN ISO 22000:2005	Food safety management systems. Requirements for any organization in the food chain
BS ISO/IEC 27000:2014	Information Technology - Security Techniques - Information Security Management Systems - Overview And Vocabulary
BS ISO/IEC 27001:2013	Information Technology - Security Techniques - Information Security Management Systems - Requirements

COMPLIANCE	DESCRIPTION
BS OHSAS 18001:2007	Occupational Health and Safety Management
Building Code 2013	The Building Code 2013 is the Code for the Tendering and Performance of Building Work 2013 (the Building Code)
Building Code 2016	The Building Code 2016 is the Code for the Tendering and Performance of Building Work 2016 (the Building Code)
CCF Management Code	Civil Contractors Federation (CCF) Civil Construction Management Code
DD GEN ISO/TS 29001:2011	Petroleum, petrochemical and natural gas industries. Sector-specific quality management systems. Requirements for product and service supply organizations
Defence Industry Security Program (DISP)	The Department of Defence, in consultation with industry, has reformed DISP to provide industry increased opportunities to work with Defence and easier access to Defence security services.
HACCP	Hazard Analysis Critical Control Point
IEC 61215 Ed. 2.0	Crystalline silicon terrestrial photovoltaic (PV) modules - Design qualification and type approval
IEC 61701 Ed. 2.0	Salt mist corrosion testing of photovoltaic (PV) modules
IEC 61730-1 Ed. 1.2	Photovoltaic (PV) module safety qualification - Part 1: Requirements for construction
IEC 61730-2 Ed. 1.1	Photovoltaic (PV) module safety qualification - Part 2: Requirements for testing
IPC WHMA A 620:2012	Requirements And Acceptance For Cable And Wire Harness Assemblies
ISO/IEC 17020:2012	Conformity assessment - Requirements for the operation of various types of bodies performing inspection
ISO/IEC 17021:2011	Conformity assessment - Requirements for bodies providing audit and certification of management systems
ISO/IEC 17025:2005	General requirements for the competence of testing and calibration laboratories
ISO/IEC 17025:2017	General requirements for the competence of testing and calibration laboratories
ISO/TS 16949:2009	Quality management systems - Particular requirements for the application of ISO 9001:2008 for automotive production and relevant service part organizations
ISO 3834-2:2005	Quality requirements for fusion welding of metallic materials - Part 2: Comprehensive quality requirements
ISO 9000 QUALITY MANAGEMENT COMPENDIUM	Iso Standards Compendium - Iso 9000 Quality Management
ISO 9001:2008	Quality management systems - Requirements
ISO 14001:2004	Environmental management systems - Requirements with guidance for use
ISO 14001:2015	Environmental management systems - Requirements with guidance for use
ISO 14310:2008	Petroleum and natural gas industries - Downhole equipment - Packers and bridge plugs

COMPLIANCE	DESCRIPTION
ISO 15926-2:2003	Industrial automation systems and integration - Integration of life-cycle data for process plants including oil and gas production facilities - Part 2: Data model
ISO 45001:2018	Occupational health and safety management systems - Requirements with guidance for use
ISO 55001:2014	Asset management - Management systems - Requirements
ISO QM SYSTEMS:1997	Iso 9000 Quality Management Systems - Guidelines For Enterprises In Developing Countries
PAS 99:2012	Specification of common management system requirements as a framework for integration
PD ISO Guide 34:2009	General requirements for the competence of reference material producers
Painting Contractor Certification Program	PCCP accredits painting contractors who can demonstrate compliance with certain defined minimum performance standards - quality systems, satisfied customers, skilled and experienced personnel etc.
SAE AS 5553:2013	Fraudulent/Counterfeit Electronic Parts; Avoidance, Detection, Mitigation, And Disposition
SAE AS 6081:2012	Fraudulent/Counterfeit Electronic Parts: Avoidance, Detection, Mitigation, And Disposition - Distributors
SAE AS 6496:2014	Fraudulent/Counterfeit Electronic Parts: Avoidance, Detection, Mitigation, And Disposition - Authorized/Franchised Distribution
SAE AS 9120:2009	Quality Management Systems - Requirements For Aviation, Space And Defense Distributors
